

# The Periplanómenos Whistles

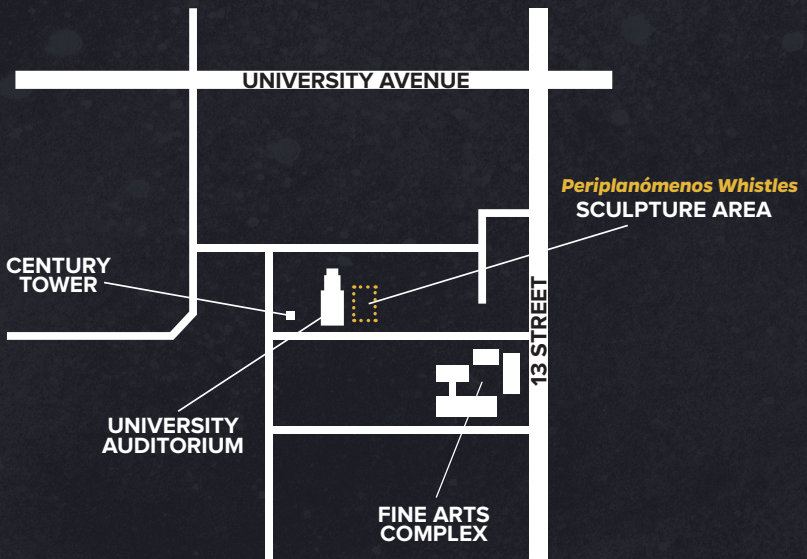

*The Periplanómenos Whistles* is a sculptural installation that consists of three colorful wooden columns, each about 12 feet high. At the foot of each column is a concrete base, each is of a different design that relates both to architectural staircases and platforms as well as to traditional display pedestals. A closer look reveals a red mouthpiece parallel to an opening, located on various heights in each column. This, along with the title of the piece, indicates that the columns are in fact functional instruments that can produce sound.

**WEDNESDAY, APRIL 20<sup>TH</sup> | 5 PM**

East side of the University Auditorium

**Demonstration and music performance | 5:30 PM**

Dr. Kristen Stoner and the UF Flute Studio
